BATCH SCALE

# BASCA

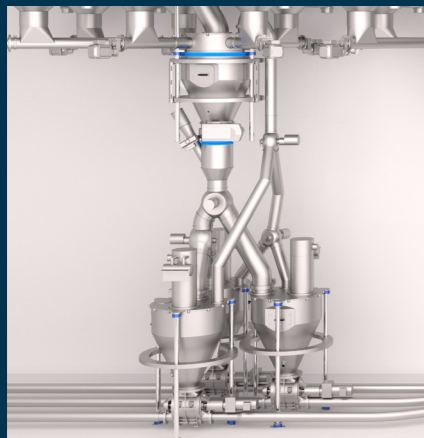

The BASCA bulk scale is a highly precise measuring instrument designed for the gravimetric weighing of powdery and granular products. This calibratable bulk scale stands out for its exceptional accuracy and unmatched reliability, thanks to its innovative drive and control technology.

Type	Diameter mm	Height* mm	Flap discharge	Airlock discharge	Temperature measurement
100	700	900		X	X
300	900	1500	X	X	X
400	900	1700	X	X	X
1000	In work				
2000	1500	2200	X	X	X
4000	In work				

\* Without feeding and aspiration elements

For the processing of ingredients in industrial food plants, precise batch weighing by exact dosing is required. The BASCA batch scales with the various expansion variants and options are suitable for performance-oriented process control and for recipe-oriented mixing. The individual weighings are determined exactly. The output is precisely regulated and the weight is accurately recorded. An extraordinary robust control with touch screen and the precise SWISCA measuring cells guarantee a reliable quality assurance. The product can be fed through piping, screw conveyors, or pneumatically. An attachment filter connection is available for aspiration.

**Intake options**

Intake via gravity piping, screw conveyor or pneumatics

**Outlet options**

Flap discharge

Airlock discharge

## Benefits

- + Precise weighing
- + Hygienic design, easy to clean
- + Modular and compact for versatile use

IOT compatible control unit with touch screen

Made entirely from stainless materials

Cleaning door

Temperature sensor (optional)

Butterfly valve
