BIGBA

SWISCA's Big Bag filling station offers a modular design and is available in both standing and hanging versions. The integrated weighing system ensures precise weight control, while an optional inlet slide allows for coarse and fine product dosing. Made from stainless steel, the station offers durability and protection against contamination from coating materials. The operation without compressed air reduces energy costs. A practical lever lock makes it easy to quickly attach the Big Bag, and the user-friendly control system ensures an efficient operation. Optionally, the filling station is available as a calibratable bagging station.

Standing with inlet slide

Suspended with inlet slide

Suspended with aspiration hood

Type	Frame height mm	Frame width mm	Frame depth mm	Diameter Inlet mm	Diameter Outlet mm
Standing	2300	1600	1404	150 (slide) 200 (hood)	300
Suspended	Individual	1600	1404	150 (slide) 200 (hood)	300

Benefits

- + Energy-efficient, compressed air-free operation
- + Accurate product dosing
- + Calibratable version
- + Modular design for individual requirements

Dust-tight motor cover

Inlet slide with servomotors for coarse/fine dosing

Completely made of stainless materials

Lever lock for easy attachment of the big bag

Control system with intuitive user interface
